

Solution Requirements

Date	25 September 2026
Team ID	SWTID-2026-1063
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	The system shall allow authorized ServiceNow users to access and work with Incident records based on their assigned permissions.	High
2	Authorization levels	The system shall apply ServiceNow user roles and permissions to control access to Incident records and configuration features such as Client Scripts and UI Policies.	High
3	External interfaces	The solution does not require any external API or third-party database. It operates within the ServiceNow platform and uses the Incident table.	Low
4	Transactions processing	The system shall process Incident form changes and apply the configured Client Scripts and UI Policies when users create or modify Incident records.	High
5	Reporting	The system shall allow administrators to review Incident records and verify the results of the implemented configurations during testing.	Medium
6	Business rules, etc.	The system shall apply the High Impact UI Policy, automatically set Urgency when Impact is High, validate Assigned To before submitting a High Impact Incident, and control direct State changes through list editing.	High
7	Compliance to laws or regulations	The solution shall follow the access-control and data-handling practices available within the	Medium

		ServiceNow platform and the organization's authorized usage policies.	
8	Other	The system shall provide dynamic field behaviour on the Incident form and display appropriate validation messages when configured conditions are not satisfied.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Client Scripts and UI Policies should execute quickly when Incident fields are changed or submitted.	Configuration should respond within a few seconds under normal conditions.
2	Scalability	The configuration should continue to work when the number of Incident records increases.	Should operate correctly with increasing Incident records without changing the configured logic.
3	Security & Data Privacy	Only authorized users should be able to access Incident records and modify the Client Scripts and UI Policies.	Access should follow the assigned ServiceNow roles and permissions.
4	Reliability & Availability	The configured Client Scripts and UI Policies should consistently execute whenever their defined conditions are satisfied.	100% success during defined functional test cases under normal ServiceNow availability.
5	Usability & Accessibility	The Incident form should provide clear field behaviour and understandable validation messages to users.	Users should be able to understand the required action without technical knowledge.
6	Other	The configuration should be maintainable and easy for an administrator or developer to understand and modify.	Scripts and UI Policies should have clear names, conditions, and readable configuration.
